

# 3 Ways to Optimize Security for a Remote Workforce

Vincent Gaglioti, Senior Solutions Engineer at  
Veriff

22 March 2023

# Market Issues

- Hire the right talent wherever they live
- Confirm correct applicants interview for your roles
- Ensure only authorized employees can access your equipment
- Enable fast and secure access to your services

# Identity proofing for identity and access management

## ✓ Remote hiring (I9 Compliance)

Ensure identity & employment verification is part of your pre-employment screening, or background check process

## ✓ Remote access management

Ensure that the right people are accessing sensitive data and restricted sites remotely

## ✓ Centralized access to public services

Enable secure and inclusive authentication for citizens

# Case Study #1

## Global employee onboarding

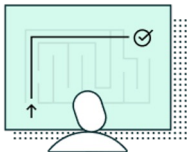

### Fortune 5 Company:

- Needed 1-9 compliant scalable and secure digital solution to rapidly onboard thousands of remote employees.
- Capture accurate personal information for employee portal creation

Use case evolved from remote verification for hiring & onboarding to issuing & reissuing physical badges plus account and credential recovery for their employees.

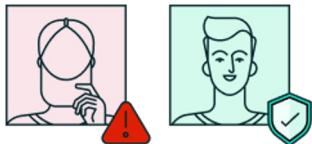

# Case Study – Employee onboarding flow

## New employee

*Starts onboarding with requested verification*

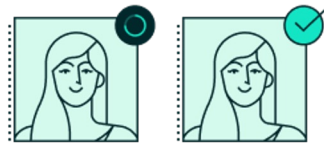

## Verify

*Employee can complete verification from anywhere*

## Access granted

*Verified employees can use company systems*

## SOS

*Auditable and simple process for credential resets*

# Case Study #2:

## Asset allocation and management

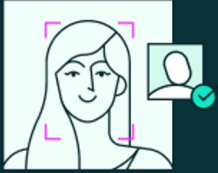

### Talent and Hiring Company:

- Needed to qualify overseas candidates skills
- Ensure the person performing the assessment is the same person who is being hired
- Ensure the correct person is receiving company assets

Veriff was able to target the 20% of applicants who were stealing assets that were sent to them via the mail.

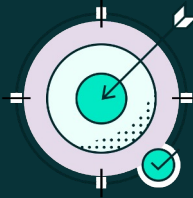

# Case Study – Business impacts

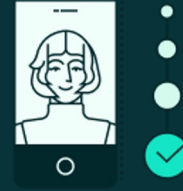

## Number of Imposter Accounts Reduced

Using Video and Passive Liveness Screening

## Mitigation of Location Masking

By using Network and Device Fingerprinting

## Brand Reputation Protection

By improving Due Diligence and Accountability

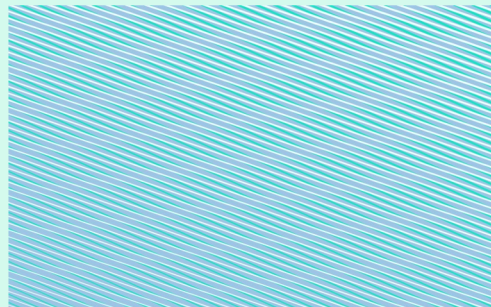

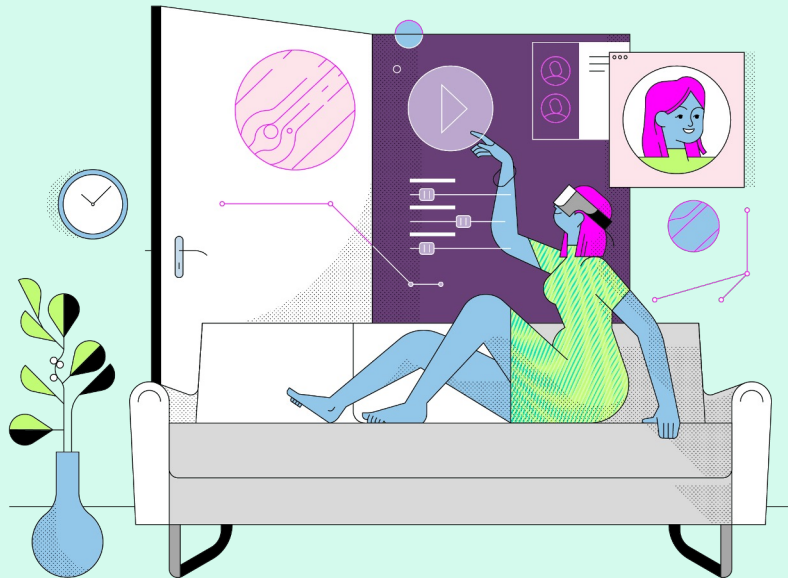

# Case Study #3

## Single Citizen Access

### G20 Government:

- Required a scalable, resilient and inclusive solution
- Enabling rapid citizen access to different public services online
- Safeguarding citizens and protecting Government departments from fraud risk

Veriff has enabled secure citizen access to online services

# Case Study – Service Coordination

Step 1

## User Requests Access

*Login/Account creation initiated from service site*

Step 2

## Centralized Portal

*User directed to core gateway*

Step 3

## Identity Proofing

*Secure authentication and verification of individual*

Step 4

## Credentials Returned

*Resulting verification returned to service site*
